

Openbravo announces general availability for Openbravo 3

- Demand for Industry Leading Open Source ERP Continues to Surge -

SAN FRANCISCO, Calif. - June 15, 2011 – **Openbravo**, the leading web-based open source ERP provider, today announced that Openbravo 3, the latest version of its flagship Enterprise Resource Planning (ERP) software, is now available in general available status.

General availability means that Openbravo now considers Openbravo 3 its most stable release and it recommends it for adoption for all users and projects. Openbravo 3, first launched in February 2011 in controlled release status, introduced the concept of 'Agile ERP' to a software category known historically for bloat and cost overruns. Openbravo's Agile ERP approach is a significant departure from mainstream ERP, which forces businesses to over-pay for massive, yet inflexible systems. Unlike today's conventional ERP, organizations can deploy Openbravo in as little as two weeks, then add modular functionality as the needs of their business evolve.

Even as a controlled release version, Openbravo 3 has been met with overwhelmingly positive reviews by industry analysts, media and customers alike. Today, this amazing product becomes generally available having already achieved a great degree of success in the field:

- **More than 70,000 downloads**
- **More than 6,000 new installations**
- **More than 200 production deployments of Openbravo 3 Community Edition**
- **More than 30 on going implementations of Openbravo 3 Professional Edition**

"Today's achievement marks the completion of a long development cycle, started over two years ago. I am grateful for all the help that we received from

our Community during this period, ranging from reviews on the early design concepts to feedback on the earlier release candidates, as well as code contributions. This collaborative engagements is a proof of the power of an open source community; it also ensures that Openbravo 3 today is not only an awesome product but it is rock solid and ready even for the most demanding deployment.” said Paolo Juvara, CEO of Openbravo. *“The general availability of Openbravo 3 marks a major milestone toward our full vision for Agile ERP, which helps make agile business a reality.”*

Openbravo 3 is available in two editions, **Professional** and **Community**, both of which provide core open source functionality for Finance, Sales, Procurement, Warehousing and Master Data. Thanks to the new Workspace functionality, Openbravo 3 can add business value beyond the traditional back-office role of ERP to become a virtual control center for organizational activity for a broader set of users.

Openbravo Professional Edition is distributed exclusively through Openbravo business partners, and includes advanced functionality, support and full in-app access to all Openbravo modules to incrementally extend the Openbravo capabilities to meet evolving business needs. Downloaded more than 2,000,000 times, **Openbravo Community Edition** has a broad functional footprints, is ideal for small businesses exploring ERP and is available for free **download**.
