

Openbravo, the leading web-based professional open source ERP for SMEs, attending SIMO 06

El ERP profesional, en software libre y entorno web, líder en el mercado de las pymes, participará en la feria más importante de la tecnología en España

Pamplona, (Spain) – October 24th, 2006. Openbravo, provider of the leading web-based professional open source enterprise resource planning (ERP) system, will be attending the International Data Processing, Multimedia, and Communications Show, held on November 7-12 in Madrid. Visitors will be able to find out more about our company, product, and professional service offerings and to try our on-line demo (which can also be found at www.openbravo.com). Come and visit us at Hall 4, Professional Software Sector, Pymestic Area, Stand 4C305!

Openbravo has developed an open source web-based enterprise resource planning (ERP) system for small and midsize enterprises (SMEs). Our system helps companies to manage daily operations, optimize business processes, enhance customer satisfaction and, ultimately, increase profitability.

Openbravo has been successfully implemented by many companies in the distribution, services and manufacturing industries, regardless of size. The system's revolutionary architecture results in a better way to build software applications and permits license-free distribution, which optimizes the implementation investment. Thanks to the web-based nature of this application, users can access the program from any location just equipped with a standards-based web browser.

Since its launching, the system has aroused a lot of interest within the global community and the company has received numerous partnership applications from every continent, all of which highlights the great potential of this high-class open source software. Openbravo has signed collaboration agreements with several national and international partners and is in advanced talks with a number of partners based all over the world. Openbravo provides its partners with a complete suite of high-quality services geared toward professional support at each stage of their sales cycle.

Openbravo has achieved exceptional results in a very short amount of time. Release 2.0 of the Openbravo open source web-based ERP solution was launched on April 18th, 2006. By August, Release 2.11 was already dominating the ERP project category on SourceForge, and on October 7th 2006, Release 2.13 had become SourceForge's #1 top ranking project overall.

Manel Sarasa, CEO of Openbravo said: "With close to 150,000 projects posted on SourceForge, we are extremely proud to have reached the number one position in such a short amount of time. The Openbravo team is continually working on improving and evolving our ERP solution and services. We'd like to offer special thanks to our energetic global community of users, partners and developers, which have largely helped Openbravo to get here. Openbravo believes that every company, regardless of its size,

has the right to have its own ERP- owned by the company and specifically adapted to its needs.“

About Openbravo

Openbravo is the leading professional web-based open source enterprise management (ERP) solution for small and midsize enterprises (SMEs). It delivers a fully integrated, web-based ERP system tailored to the needs of any company, regardless of size or industry sector. The functionality of Openbravo is in continual growth thanks to an expanding international community of users, partners and developers. Openbravo helps companies to manage daily operations, optimize business processes, enhance customer satisfaction and ultimately increase profitability. In January 2006, Openbravo secured a €5 million (\$6.4m) financing agreement with Sodena - record funding for an open source ERP company - to fuel further software development and international growth.
